Abstract

In this research manuscript studies to investigate the association between tourism and Foreign Direct Investment (FDI) in emerging countries by selecting Malaysia from amongst the developing countries. The connection among tourism and FDI growth has been argued whether tourism contributes to the growth of FDI or it is impacted by growth of the economies (economic-driven tourism development). This paper studies the impact of tourism on Foreign Direct Investment (FDI) growing in Malaysia. The purpose of this paper is to identify the key factors influencing foreign direct investment (FDI) in the Malaysia tourism business. This is done in order to effectively attract and withstand FDI as well as to remain economical.

1. Introduction

Tourism has develop one of the most important export sectors in many emerging countries. An over-all compromise has emerged that it not only the growths of foreign exchange income, but also generates employment openings, motivates the growth of the tourism business and by advantage of this, activates over-all financial development. Malaysia is a somewhat unexpected entry on the most visited list, especially compared with the usual tourist destination of Paris, London and New York. A visit to Malaysia is nearly corresponding to visiting two countries in one, as the point on which the country is located is divided by the South China Sea. One of its landmass features the fabled, but lessening, jungle of Borneo, whilst the western area is made up of plains and cultural mix of Malay, Chinese and Indian influences. Unlike some of the countries in the area, Malaysia relishes a stable political and economic setting and is making use of her funds to host her 25 million annual visitors. Beach, adventure, and safari holidays are all available, and for the less intrepid the country is the proud owner of a LEGOLAND and a hello kitty Theme park (the first outside of the other country). According Top 10 Tourist Destinations in 2012 Malaysia was on tenth position and twenty five million tourist visited to Malaysia, the famous tourists spot are Petronas (Twin Towers) in Kuala Lumpur, Eye on Malaysia / Ferris wheel in Kuala Lumpur, Kota Kinabalu in Sabah, Melaka in Malacca, Langkawi in Kedah, Sunway Lagoon in Petaling Jaya, Batu Caves in Kuala Lumpur, offering the beauty of world and true nature - Malaysia is unique and has a multi-cultural society to see and experience. An International world class Airport, Metro, road networks and latest infra-structure are the main sources to attract the worlds eyes, the innocent people and their humble and friendly behavior and soft manners in dealing with tourist is a source of attraction for foreign tourists.

2. Literature

From past studies tourism and foreign direct investment the following studies have been carried out and published.

The aim of this studies is to relate the results of three isolated input-output studies carried out to measure and display the contribution of international tourism to the economy of Bermuda in judgment with the effects made by other export areas (Archer, B. 1995)

The purpose of this studies is to discover the empirical relation among foreign direct investment (FDI) in real estate sector and international tourism. Panel co-integration and panel Granger causality techniques are functional to analyze both long-and short term link with each other's (Fereidouni, H. G., & Al-mulali, U. 2014)

The aim of this study is to observe the important link among foreign direct investment (FDI) and tourism in China. This clarifies the fast progress in the tourism marketplace in China during the past decade and attracted more tourist in China (Tang, S., Selvanathan, E. A., & Selvanathan, S. 2007)

In this study we found the impact of tourism receipts, exports and foreign direct investment on economic growth on four ASIAN countries namely India, China, Pakistan and Russia. Tourism and export are play important role increase FDI (Tiwari, A. K. 2011)

Following a brief overview from this study of the recent growth of tourism in Hungary, describes foreign direct investment (FDI) projects implemented, or currently in developing, in the hotel, accommodation and catering sub-sectors of Hungarian tourism. Tourism is main source for FDI in Hungary (Behringer, Z., Kiss, K., & Hall, D. R. 2004).

The purpose of this studies is examine foreign direct investment (FDI) in the term of tourism industry of Turkey and the relevance of international business theories in explaining that foreign investment tourism is played majors role (Buckley, P., & Geyikdagi, N. V. 1996)

Tourism is a major income source in the world like in Vietnamese Government has embattled it for planned foreign direct investment (FDI). Notes although research scholars and strategy makers understand specific features of tourism, they often misperceive how the variables interrelate within economic and political systems. (Haley, U. C., & Haley, G. T. 1997)

In this paper the authors tried to discuss Nation Branding dimension tourism is a tools for foreign direct investment (FDI) in Pakistan, and to find the interrelation between nation Branding dimension tourism and foreign direct invest in Pakistan (Alam, A., Almotairi, M., & Gaadar, K. 2013)

Conclusion of this study proposes that there may be numerous details of ineffective relationship among imperceptible assets (tourism) of poorer countries and economic growing of the country, but brand theory proposes that lacking an influential stratagem for deploying a creative and harmonized way is the major cause. Tourism is played majors role in developing countries (Alam, A., Ullah, S., Ahmed, M., & Gaadar, K. 2013)

Tourism is one of the greatest rising industries in the world. Many developing countries reflect it as opportunity for raising export incomes. Most significant part in the internationalization of production has foreign direct investment (FDI). This paper examines the influence of FDI (Foreign direct investment) on economic development (Ivanovo, Z., Baresa, S., & Bogdan, S. 2011)

The aim of this study medium and long delay in a reasonable period, the increase in the size of inbound tourism can effectively promote FDI flows, they cannot form a feedback mechanism of interaction. Tourists scale changes on the FDI impact on the most significant changes for longer. The scale of FDI impact on inbound tourism value the most and widest amplitude, but the lag effect is not stable enough (Ming, G. A. O. 2011)

The main objective of this research is to examine the existing state of (FDI) in China and the influence in Tourism Sector in terms of flows, geographical distribution, employment, type and quality of services, etc. Furthermore, it will be attempted to estimate its effects on the domestic tourism industry and the national economy at large. (Broadman, H. G., & Sun, X. 1997).

This research manuscript tries to determine the factors poignant foreign direct invest (FDI) in Tourism area, appraises the policies adopted to attract FDI, and examines the benefits of foreign direct invest (FDI) in the growth of Tourism sector. (Sharma, P. K., Jadhav, U. N., Singh, E. H., & Mahapatra, A. 2012)

3. Research Frame Work

4. Hypotheses

- H₁** There is a relationship between tourism receipt and FDI
H₂ There is a relationship between total number of tourist and FDI

5. Objective

To find out the relationship between tourism and FDI. What is the impact of tourism on FDI? The main objective of this work is to recommend the optimum ways in which Malaysia can improve tourism and brand itself as a country by considering the different factors that can be used to enhance its image and create a unique identity for itself among the nations of the world and to use this positioning as a source of attracting FDI in Malaysia.

6. Data and Methodology

This paper evaluates the relationship of Tourism and foreign direct investment (FDI). Is tourism playing any important role to increase foreign direct investment in Malaysia? The data are available from time period of 1995 to 2011, and it qualitative research secondary source of data are collected from World Bank data sources. From this 17 years data we will analyze and find out the results and its effects on FDI. FDI is tabulated in US dollars as well as total receipt from tourism and total numbers of tourist in millions. The update value for Foreign direct investment (FDI), net influxes (Bop, current US\$) in Malaysia was \$12,000,760,000 as of 2011. Over the past 17 years, the value for this indicator has fluctuated between \$12,000,760,000 in 2011 and \$4,178,239,000 in 1995. In the year (1996-1995) the difference in FD was 900176000.00 US\$, in the years (1997-1996) FDI difference was in US \$8,100,000.00 \$. In the year (2011-201) the difference of FDI was in US \$2,833,558,000.00, the up-to-date value for International tourism, receipts (current US\$) in Malaysia was \$19,593,000,000 as of 2011. Over the previous 16 years, the value for this pointer has diverse among \$19,593,000,000 in 2011 and \$3,237,000,000 in 1998. The value for International tourism, number of arrivals in Malaysia was 24,714,000 as of 2011. As the table under shows, over the past 16 years this indicator reached an all-out number of 24,714,000 in 2011 and a minimum number of 5,551,000 in 1998.

FDI, Receipt of Tourism and Total Numbers of Tourist (1995-2011)

Year	FDI in US \$	Total Receipt in US \$	Total Number of Tourist
1995	4178239000	5044000000	7469000
1996	5078415000	5732000000	7138000
1997	5136515000	4925000000	6211000
1998	2163402000	3237000000	5551000
1999	3895263000	4403000000	7931000
2000	3787632000	5873000000	10222000
2001	553947400	7627000000	12775000
2002	3203421000	8084000000	13292000
2003	2473158000	6799000000	10577000
2004	4624210000	9183000000	15703000
2005	3924787000	10389000000	16431000
2006	7690731000	12280000000	17547000
2007	9071370000	17948000000	20973000
2008	7572512000	18553000000	22052000
2009	114664400	17231000000	23646000
2010	9167202000	18315000000	24577000
2011	12000760000	19593000000	24714000

Sources: <http://www.indexmundi.com/facts/malaysia/international-tourism>

In methodology first we will find out correlation between total numbers of tourist, and total receipt and foreign direct investment (FDI), then we will find out the liner regression analysis to find out the relationship and its impact on foreign direct investment (FDI). Total number of tourist (IV) and total receipt (IV) are independent variable and foreign direct investment (FDI) is dependent variable.

7. Empirical Results

1- Model Summary of FDI, Total Number of Tourist and Total Receipt from Tourism

Model Summary				
Model	R	R Square	Adjusted R Square	Std. Error of the Estimate
1	.707 ^a	.500	.429	2410770278.117

a. Predictors: (Constant), Total Number Tourist, Total Receipt (US\$)

From above table $R^2 = 0.500 = 50\%$, 50% change of change in Foreign Direct Investment (FDI) explained by change in Total Number of Tourist and Total Receipt from Tourism, foreign direct invest (FDI) 50% depend on Tourism revenue, its if tourism increase so FDI will increase

2- Anova Model of FDI, Total Number of Tourist and Total Receipt from Tourism

ANOVA ^a					
Model	Sum of Squares	df	Mean Square	F	Sig.
Regression	81417407287524980000.000	2	40708703643762490000.000	7.004	.008 ^b
1 Residual	81365386673911330000.000	14	5811813333850809300.000		
Total	162782793961436300000.000	16			

a. Dependent Variable: FDI_US\$

b. Predictors: (Constant), Total Number Tourist, Total Receipt US\$

From Anova model we conclude that the model is significant at 5% level

3- Coefficients of FDI, Total Number of Tourist and Total Receipt from Tourism

Coefficients					
Model	Unstandardized Coefficients		Standardized Coefficients	t	Sig.
	B	Std. Error	Beta		
(Constant)	3469232496.629	1640599926.890		2.115	.053
1 Total Receipt US\$	1.172	.468	2.128	2.506	.025
Total Number Tourist	-728.188	399.205	-1.549	-1.824	.090

a. Dependent Variable: FDI_US\$

The table shows that there is a positive connection between Total Receipt US\$ and foreign direct investment (FDI) FDI as the P value ($\beta=0.025$) is significant at 5% level. From above table shows that there is a negative connection between Total Number of Tourist and foreign direct investment (FDI) as the p value ($\beta=0.90$) is significant at 10% level. Moreover the regression model of the relationship between Total Receipt from Tourism and Total Number of Tourist and FDI can be described as follows

$$FDI = \alpha_0 + \beta_1 X_1 + \beta_2 X_2$$

$$Y = 3469232496.629 + 1.172X_1 - 728.188X_2$$

Where y=Foreign Direct Investment (FDI)

X_1 = Total Receipt US\$)

X_2 = Total Number Tourist

The below graph:1 shows, there is direct relationship between Total Receipt from Tourism and FDI the positive relationship between Total Receipt from Tourism and FDI, if Total Receipt from Tourism increases than FDI will also increase and if Total Receipt from Tourism decrease FDI will decrease. The graph further shows us that 9 observations

exist above the trend line in the high stage whereas 7 observations are occurring below the trend line on a lower stage while one is on the borderline. We can easily understand the implications this graph has suggesting that the government should take more active and positive steps to towards improving tourism. Which would in turn improve the overall balance of payment, economic conditions and thereby project an optimistic economy to the international world markets. Revenue from tourism has a positive effect on foreign direct investment FDI, furthermore revenue from tourism will improve the national economic conditions.

Graph 1: FDI and Total Receipt from Tourism

The below graph:2 shows, there is direct connection between Total number of tourist and foreign direct investment (FDI) the positive relationship between Total number of tourist and foreign direct investment (FDI), if total number of tourist from Tourism increases than FDI will also increase and if Total Receipt from Tourism decrease FDI will decrease. The graph further shows us that 9 observations exist above the trend line in the high stage whereas 6 observations are occurring below the trend line on a lower stage while one is on the borderline

Graph 2: FDI and Total Receipt from Tourism Number of Tourist

8. Finding and Conclusion

From empirical analysis we found that total number of tourist and foreign direct investment is significant. Proving a positive direct relation with each other's, i.e. foreign direct investment and total numbers of tourist. When the number of tourist increase so it create more revenue for the country and effect on FDI. For total receipt from tourism is directly link and have positive effect with FDI. From regression analysis it's significant and its positive relation of total number of tourist and total revenue with foreign direct investment FDI, from graph observation it have strong relation with dependent

variable and independent variable, The main purpose of this study is to examine the effect of worldwide tourism on the economic development and growth of (FDI) in Malaysia. The consequences show that the spending of international tourists positively impacts the economic development (FDI) in Malaysia. From Tourism is predictable to contribute round about 12.5% to gross domestic product (GDP) next year, development over the current influence of nearly 12%, the Tourism and Culture. However, founded on the study of this paper, it is reasonable that tourism industry is contributing meaningfully to the Malaysian economy in terms of foreign direct investment (FDI) producing output, income, employment, and value-added. As Malaysia is aimed to be a developing nation by 2018, this industry has the probable to contribute significantly near to achieving the objective Foreign Direct Invest (FDI) in Malaysia.
